Description

Amonics' nanosecond fiber lasers are with high pulse energy and excellent pulse energy stability. We offer nanosecond fibers with direct modulation diode seed lasers and narrow linewidth seed lasers with external modulation. By using our high power pulse amplifier, the laser with direction modulation can have higher than mJ output energy. By using our proprietary SBS suppression technique, our narrow linewidth nanosecond pulse laser can deliver over 180 μ J pulse energy. The applications of the nanosecond laser include laser marking, laser welding, material processing, and free spacing sensing.

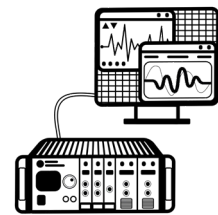

Application

- Laboratory

- Fiber Optic Sensing

- High power ultrashort pulse amplification
- High-resolution optical time domain reflectometry (OTDR)

ISO 9001 : 2015
Certificate No.: CC 5346

Our product is manufactured under a HKQAA ISO 9001 certified quality management system. The ISO 9001:2015 certification applies to the Hong Kong production site only.
